

Linking to your Learn course

Courses which are created automatically in Media Hopper Replay will be linked to the appropriate course in Learn at the point of creation. If this link has been reset, or if you are working with a manually created course, then you will need to follow the steps below.

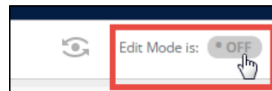

Part One: Enabling the Replay tool link in Learn

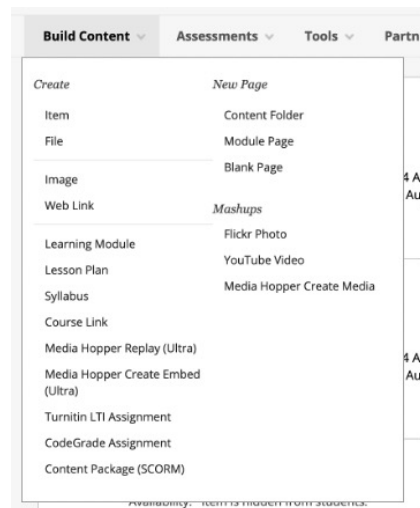

Please note: If you are using the Learn foundations template, then there is no need to perform the actions detailed below. You can access Media Hopper Replay from **Course Materials > Lecture recordings**.

To Enable the tool link in Learn:

1. Select your course from the **My courses** area in Learn;
2. Enable **Edit Mode** by clicking on the **OFF** button. It will be green when enabled;

3. Click on the **Build Content** button and choose **Media Hopper Replay (Ultra)** from the list;

4. Type "**Media Hopper Replay**" into the Name box, ensuring you complete any other additional fields you require and when ready, click **Submit**.
5. Click on your newly created link to open Replay. It will open outside of Learn in a new tab/window (depending on your browser settings).

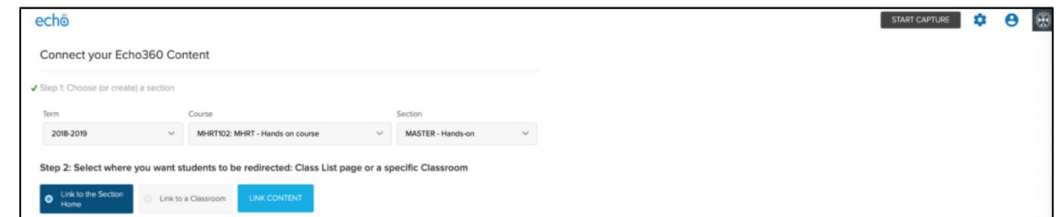

Part Two: Linking to the section in Media Hopper Replay

To Link to the section in Media Hopper Replay:

1. Using the drop-down lists under **Step 1 – Choose (or create) a section**, locate and select the course which matches the Learn course you are linking to by choosing the correct term, course and section.

2. Under **Step 2**, leave the **Link to the Section Home** option selected and click on the **Link Content** button to create the link.

When Replay opens, your newly linked course will be visible, showing any future recordings which have been scheduled. If you have accidentally linked to the wrong course, use the **Unlink LMS course** button, immediately to the left of the name in the bar, and repeat the steps above.
